Viefe 2026 Collection

Viefe 2026

Welcome to Viefe's first catalogue-magazine. A publication designed for professionals who want to go beyond products.
Here we present our collections in depth, sharing the design criteria and trends that shape our proposals. A resource to inspire projects and facilitate decisions with Viefe's guarantee of aesthetics and quality.

Architectural Hardware Kairos

At Viefe, we have drawn the concept of Kairos from Mediterranean culture to shape the new collection you are about to discover. Kairos 2026 celebrates the impulse that drives us to act with determination, but without haste. To design with awareness and transform spaces using accessories that are rich in meaning and aesthetically perfect in their forms, materials, and finishes. In short, that moment that happens when the accessories for a project have been chosen and all that remains is to install them in their final setting.

With Kairos 26, our brand takes another step forward into the world of *architectural hardware*. It does so by offering complete series of accessories—created by renowned designers from around the world—that allow interiors to be planned with a single visual line. These are solutions that adapt to different types of spaces, integrating into walls, floors, sliding doors, furniture, or appliances with elegance and absolute consistency.

The intelligence of minimalism, by Kaschkasch

Florian Kallus and Sebastian Schneider

Interview: Viefe

Every creation by KASCHKASCH combines analytical thinking with aesthetic sensitivity. Founded by Florian Kallus and Sebastian Schneider, this German studio transforms simplicity into sophistication, exploring the balance between form and gesture. The human factor, functionality, and the constant pursuit of beauty are essential to their design.

In conversation with KASCHKASCH, they revealed their experience of collaborating with Viefe to design architectural hardware elements that make a difference in residential and contract projects.

Briefly introduce yourself: how did Kaschkasch come to life? What motivated you to start the studio?

We founded KASCHKASCH in the summer of 2011. Having met at university, we quickly realized our shared vision and decided to launch KASCHKASCH right after graduation – driven by the desire to work independently and shape our creative path on our own terms. The name KASCHKASCH is formed from our surnames Kallus and Schneider, doubled to make it easier to remember :)

Which sectors have you worked in?

Our work spans a wide range of sectors: furniture (residential and contract markets), lighting, bathroom design, accessories, art direction – and of course, furniture handles or let's call it Architectural Hardware. Designing handles for Viefe, in particular, has been an especially rewarding and fun part of our journey.

How would you describe your design style?

Smart, Functional, German, Minimal and Beautiful.

What's your view on the industrial design sector?

Almost everything that surrounds us has been designed in some way, especially in an urban environment – which is why it makes sense to leave this task to professionals like us.

What would you recommend to new talents starting their journey in industrial design?

Just do it !! Trial and error.

What's your creative process like when developing a new product? What steps do you follow?

Our design approach is all about teamwork. We study the brief together and then start generating ideas, which we share and pitch to each other. The next step is to 3D print the handles and test them in our studio kitchen. After that, we make a final decision, develop all the variants, and create renders for the design presentation – discussion is key for us during the design process.

Inspiration sometimes comes in moments when you don't expect it (which is fantastic btw) and inspiration can be everything: A conversation for example, an artwork or even a detail on a construction site.

Who or what are your biggest sources of inspiration?

Humans and their behaviour, Nature, Architecture and Art.
Inspiration sometimes comes in moments when you don't expect it (which is fantastic btw) and inspiration can be everything: A conversation for example, a detail on a construction site.

How did your story with Viefe begin?

We already had some experience in designing architectural hardware before we started our collaboration with the company. At that time, back in 2020, we were still discovering the market when we first got in touch with Viefe's team. It was a perfect match right from the beginning – we were very impressed by your professionalism and hospitality. On a personal level as well, it has been a real pleasure working with Viefe. And on top of all that, the commercial success of our products has proven that we were right.

What do you value most about working with our brand?

Definitely the people & the food – how professionals everybody is at Viefe is always amazing !! :)
We both love the catalan culture.

What has your experience been like designing for the world of architectural hardware?

For us it's an amazing experience to work in that field – the size and the speed of a kitchen handle for example is fantastic for us. Most other projects we are working on take way more time to develop which is sometimes kind of frustrating. Also to understand the market and to understand how people use handles is a fantastic learning for us as designers – we are very grateful for the input from Viefe team.

Which of the products that you've designed for Viefe, gives you the most satisfaction, and why?

LUV – we love luv because it's a beautiful collection with fantastic details. And also that it includes all material options and product categories such as handle, wall hook, door stopper …..

A material…	Wood.
A shape…	Geometric shapes.
A colour…	Green.
A finish…	Natural finish such as polished or oiled.
A style of interior design…	Minimal with a warm touch.
The perfect decorative accessory is the one that…	Gives the room some attitude.
Your favourite space at home…	Kitchen.

A new way to experience the kitchen

KITCHEN TRENDS REPORT

Anticipating trends and keeping up to date with conceptual transformations in homes is fundamental to our design vision. We want each accessory to connect with the space, provide functionality, and generate feelings of comfort and balance.
That’s why we observe, listen, and explore the most relevant trends in the field of design and interiorism.

16 Trends

Now, we are taking another step in this direction by partnering with the trend agency Futurea. The result of this partnership is the Kitchen Trends report, a tool that allows us to understand how kitchens are evolving so that we can create architectural hardware products that respond to this reality and anticipate new needs.

The report highlights four trends that show how kitchens are becoming increasingly flexible, adapting to different rhythms and uses throughout the day; how there is a growing commitment to renovating without construction work, using accessible and customizable solutions; and how kitchen elements are being relocated, integrating into other spaces in the home or even outdoors. We also explore the kitchen as a place of physical and emotional well-being, where natural materials and more conscious design take center stage.

THE NEW KITCHEN

The kitchen is evolving. It is no longer just a space for cooking, but has become a living ecosystem, where there is room for work, rest, and socializing.

Our vision goes beyond functionality: the kitchen becomes alive, adaptable, and sensory. The boundaries between rooms are blurring. The kitchen opens to the living room, merges with the terrace, hosts a video call or a moment of shared relaxation. It is a space that changes depending on the moment and requires flexibility. There are surfaces that change use, tables that disappear, and appliances that can be hidden away depending on the moment. Everything flows.

In this context, design becomes decisive. At Viefe, we participate in this evolution of the kitchen with accessories that combine technical precision and aesthetic sensitivity. We care about how a cabinet opens, how light touches a finish, the feel of each material. Our products connect people with space and translate every movement within the kitchen into an elegant and comfortable experience.

(Download the complete
Kitchen Trends report from our website)

PROFESSIONAL TIP:

The placement of handles and knobs in the kitchen is a strategic factor. Their materials, finishes, and proportions can enhance the fluidity of the space, direct light, and harmonize with other interior design elements.

Budde connects people with spaces

Johannes Budde and Meike Papenfuss

Interview: Viefe

BUDDE, the German studio founded by Johannes and Meike, transforms everyday objects into sensory experiences. Their approach seeks to simplify, enhance functionality, and highlight the beauty of materials. Conceptually, they aim to create clear designs where every detail has a purpose.

In this talk, we discover how their designs for Viefe add value to each project and redefine how we interact with spaces.

Briefly introduce yourself: How did BUDDE come to life? What motivated you to start the studio?

(J) My personal journey into design started with a fascination for art and its potential to influence emotions, behaviors, and interactions. This curiosity led me to study architecture and later pursue a career as an employed (interior) architect.

Moving from architecture and interior design to furniture design felt like a natural transition to me and yet, opened an entirely new field to explore when I founded BUDDE in 2020. Meike, with a background in design management and branding, joined early to shape the business and strategic side of the studio. As a duo, we complement each other very well and found our own unique approach to designing furniture and architectural hardware.

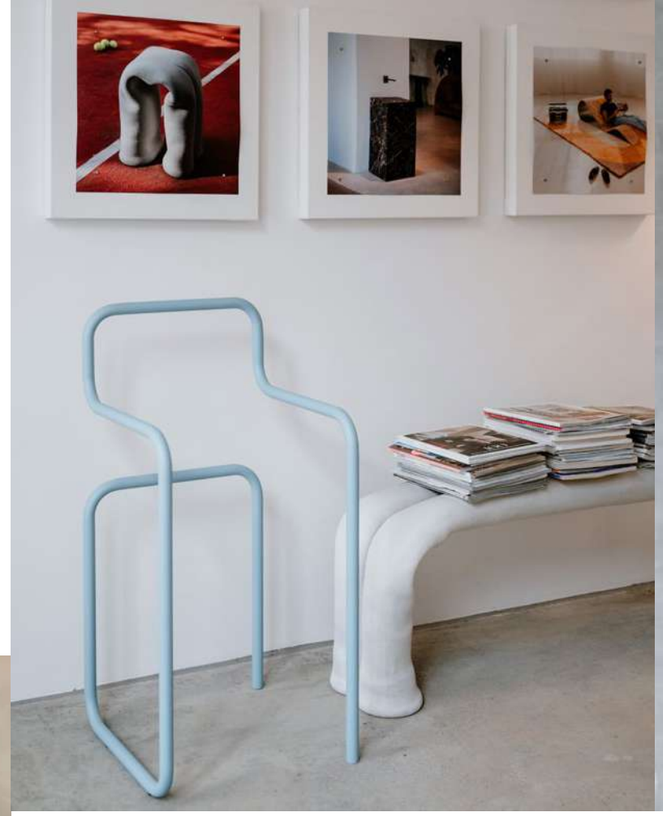

The timing of building BUDDE coincided with the pandemic, which gave us a moment to pause, reflect and align our professional aspirations. The pandemic, while challenging, also highlighted the value of thoughtful design, as people began seeking pieces that added meaning and beauty to their homes. Looking back, it was the right time to start this journey.

© MURAT YILDIRIM

Which sectors have you worked for specifically?

(M) We work across commercial and collectible furniture design, lighting, home decor, architectural hardware, and interior design. Each discipline has its own nuances, yet they are clearly interconnected – allowing us to approach projects in an interdisciplinary and holistic way.

How would you describe your design style?

(J) Conceptually, we strive for clarity in our designs, distilling each object to one essential idea where every detail should serve a purpose. We always try to carve out and highlight the natural features of a material – whether it's colors of natural stone, textures of wood, or flexibility of metal. Moreover, many of our collections encourage interaction and thereby, (re-)connect people with their senses and surroundings. Our designs should not feel distant like art sometimes does, but very tangible and inclusive for everyday use. In order to achieve this, aesthetic and functionality have to go hand in hand.

What's your view on the industrial design sector?

(M) Industrial design plays a crucial role in shaping everyday life. It's about solving problems through thoughtful solutions but also about creating emotional value beyond pure functionality. The best industrial design strikes a balance between logic and poetry – practical, yet capable of sparking a feeling.

What would you recommend to new talents starting their journey in industrial design?

(M) - Build a network: opportunities often arise through the people you connect with.
- Show and share your work, even if it's not perfect yet.
- Build a team with complementing skillsets and characters.

What's your creative journey like when developing a new product? What steps do you follow?

(J) The process typically starts with a rough idea – sometimes a sketch, sometimes just an abstract thought. We quickly translate it into 3D and test proportions digitally before printing small-scale prototypes. Having something tangible helps refine shapes and details.

When collaborating with brands on commercial products, we work closely with their in-house experts. They bring deep material knowledge and production insights, while we focus on concept and design direction. It's a back-and-forth process of refining, testing, and adapting until the final piece is ready for production.

For collectible designs, the process is more open-ended. We experiment with forms, textures, and material treatments, often working with artisans or fabricators to push boundaries and explore unconventional methods.

Who and what are your biggest sources of inspiration?

(J) Our inspiration comes from everyday life – observing, reflecting, and creating with a specific context and audience in mind. A change of environment or perspective can spark new ideas, as can breaking routines and consciously seeking new experiences. Even small changes, like rearranging a room, can make the familiar feel new again, unlocking fresh perspectives. Silence is just as important. The best ideas often come in moments of stillness, just before falling asleep. Letting go of mental noise allows thoughts to surface and take shape.

A person who continues to inspire me is James Turrell. His ability to blur the boundaries between landscape, architecture, and objects through the use of light is simply fascinating.

© MURAT YILDIRIM

How did your story with Viefe begin?

(M) Sometimes, the best "love" stories begin without the highest expectations, don't they? :-)

We simply reached out and convinced the team with our proposals – tailored to Viefe's needs at the time. Afterward, we met in person during Salone del Mobile in Milan. It was a fit on a personal level which we believe is the best foundation for a long-term collaboration.

What do you value most about working with our brand?

(M) We truly value the trust Viefe placed in us as a newcomer design studio and not having extensive experience in the sector of architectural hardware. The team's openness, honest feedback, and collaborative spirit have been key to our creative process. It feels like a true partnership built on mutual respect.

What has your experience been like designing in the world of architectural hardware?

(J) Architectural hardware is fascinating because it's often overlooked. Handles, knobs, or hooks serve clear functional purposes, yet they shape how we experience a space. At first glance, it may seem that everything already exists, but we quickly learned that there's still plenty of room for innovation. These small-scale objects can add surprising emotional value and transform a room through subtle details. The creative constraints of this category make it even more rewarding. Designing for Viefe has been both challenging and fun.

Which of the products that you've designed for Viefe, gives you the most satisfaction? Why?

(J) As an architect, I'd say the door handle. It's a product we touch countless times a day, yet rarely think about. That's what makes it so interesting – it's intimate, functional, and symbolic at once. Designing something so "ordinary", yet giving it a sense of character and surprise, feels really rewarding.

A material…	Can't decide! We love variety.
A shape…	Round.
A colour…	Dark red.
A finish…	Satin matt.
A style of interior design…	"make it your own" (individual freedom over categorization).
The perfect decorative accessory is the one that…	Sparks thoughts and emotions.
Your favourite space at home…	Lying on a cozy rug in the living room.

OUR ROOTS ARE IN CRAFTSMANSHIP

To know our history means to understand what shapes each of our pieces. At Viefe, we believe that contemporary design finds its full meaning when it is based on a solid legacy, built on craftsmanship, sensitivity to materials, and a way of doing things that has stood the test of time. Our history is the foundation that drives us to create products that combine tradition, innovation, and a keen eye toward the future.

At Viefe, we were born from wood. The history of our brand begins in the boxwood forests of the Vall del Ges. Our roots lie in the tradition of artisan woodturning in Sant Pere de Torelló (Barcelona) and in the expert hands that, generation after generation, have known how to transform wood into unique objects.

We began our journey in 1932, manufacturing wooden buttons in a workshop whose walls are now part of history.
Inside, time seems to have stood still to preserve the memory of the handcrafted pieces we once made.
Each machine and each object tells the story of a time, not so long ago, when manual labor was essential and decisive.

In the 1970s, we specialized in the manufacture of small methacrylate and polyester accessories for the fashion industry.
In addition to buttons, we began to manufacture buckles, rings, and decorative balls.
Then, in the early 2000s, we reoriented the company towards the manufacture of knobs and handles.

Today, almost 100 years after we continue to design decorative accessories for a world seeking balance.

Amidst the fast pace that surrounds us, fine materials reconnect us with the essentials
and allow us to bring warmth, harmony, and a deep connection with nature to spaces.

34 — 45

Special wood selection

We work with wood passion

Passion, expertise, and a long history of craftsmanship back us in the design and manufacture of wooden accessories. We use certified wood obtained from sustainably managed forests to make them. We work it by combining traditional techniques with precision technological processes that allow us to shape knobs, handles, door stoppers and wall hooks with a refined aesthetic and impeccable functionality. These are resistant pieces, stable in their fastening and with perfectly polished finishes. With small details that invite you to pause, touch the wood, and enjoy the pleasure of a job well done.

Viefe

Series

Details that connect spaces

Boto, Fase, Brooklyn, Casey and Luv.

Harmony is everything. The Viefe series was born from this idea: aesthetic consistency between accessories allows interior design projects to breathe the same visual language. The consistency of the details unifies the perception of the environments.

Our series speak of style and harmony. They organize, connect, and elevate spaces. They allow projects to reach their full potential with high-quality materials, unique shapes, and precise finishes.

With them, the concept of architectural hardware takes on its full meaning and turns small accessories into major players capable of transforming spaces.

PROFESSIONAL TIP:

Opting for complete series ensures visual continuity, reduces contrast saturation, and facilitates the selection of finishes.

TRIBUTE TO OUR ARTISANAL PAST

The German studio KASCHKASCH has brought Boto to life, a series that pays tribute to Viefe's artisanal origins by reinterpreting the shape of the buttons that marked the beginning of our company. The rounded lines and carefully crafted profile of its designs connect with our roots in woodturning.

The products in the Boto series blend naturally into contemporary interiors without compromising their artisanal essence.

In this project, the Boto collection provides the aesthetic solidity and functional precision required by an interior that combines modernity, craftsmanship, and timelessness. The Boto handle, with its balanced geometry and characteristic striated texture, provides a striking and ergonomic presence on interior doors, becoming the visual and tactile anchor point of the series. In the same line, the Boto door stopper completes the set with a bold design, conceived to guarantee protection and stability without compromising on aesthetics.

The new collection also includes a 45 mm diameter knob and handles available in 160, 320, and 1024 mm center-to-center distances, sizes that allow for comfortable use in kitchen and bathroom furniture as well as large-format cabinets.

BOTO SHOWER KIT

To ensure aesthetic continuity in all the spaces that connect a project, the series introduces an important new addition to the Viefe product range, the Boto shower kit; a knob and trim specially designed for shower screens. It maintains exactly the same features that define the collection and is available in the same finishes: polished nickel, brushed black, brushed brass cava, brushed bronze, and stainless steel look. Its construction is designed to offer optimal resistance in high-humidity environments, preserving stability and feel even with daily use and demanding conditions. In this way, Boto not only dresses up the furniture, but also becomes an indispensable element for the most modern bathrooms, providing continuity, functionality, and an impeccable design finish.

Boto is a timeless collection, ideal for projects that prioritize materiality. It will provide you with that unique detail that is ideal for accompanying the most ambitious projects: handles, pull handles, door handles, wall hooks, and door stoppers, all designed with the same formal language. The stainless steel look finish is one of the most refined options in the series, perfect for projects where wood or organic materials need a companion that helps to reinforce and enhance the craftsmanship without unnecessary ornamentation, thanks to its matte appearance and its ability to capture and reflect light in a subtle way. It provides a sense of visual cleanliness and sophistication that fits perfectly with the balanced and Nordic character of the collection.

Fase Designed by Budde

THE HEARTBEAT OF INDUSTRIAL DESIGN

The constant pulse emitted by the Earth is the inspiration that led German studio BUDDE to create the accessories in the Fase series. Its design reinterprets one of the undulating phases of this geological phenomenon in an industrial key. With its clean, cylindrical, and refined aesthetic, Fase combines minimalism with a timeless aesthetic that fits into all kinds of spaces.

The Fase series is perfect for projects that aim for balance, sobriety, and a visual solidity that stands the test of time.

The series is expanded with a 23 mm diameter knob and a 52 mm T-shaped knob, designed to offer a comfortable grip without losing elegance. From there, the collection offers a wide variety of handles: from the most versatile formats, 160 and 320 mm, to Fase big, a sculptural handle available in 320 and 480 mm between centers, ideal for large cabinets, sliding doors, or even interior doors, where ergonomics and firmness are essential.

FASE SHOWER KIT

The Fase collection is also expanding with its own shower kit, designed to bring that same technical language to shower screens. This knob with trim maintains the proportions, bevels and transitions that define the series, adapted to a compact format specifically for wet environments. Manufactured in brushed bronze, brushed brass cava, stainless steel look, brushed black, and PVD polished titanium black finishes, it guarantees moisture resistance, stability, and an impeccable feel even with continuous use.

Ø20 MM

Integrating pieces from the same series that are designed to coexist and complement each other reinforces the personality and coherence of the project. In this open-plan, multifunctional kitchen, the models from the Brooklyn series help to maintain the elegance and sophistication that the space requires. Following the great success of the Brooklyn model, in addition to expanding its possibilities with the new door handle, we are including two new versions of knobs, with four finishes available. Now, alongside the T-shaped knob, the series incorporates the Brooklyn knob (20 mm diameter) and Brooklyn big knob (40 mm diameter), offering more options to customize each project.

The series also includes two sizes of wall hooks, two models of door stoppers—floor and wall—and three sizes of handles, including the long handle, designed with three support points for greater stability. For large spaces that require more presence, the series offers the Brooklyn big, available in two lengths: 466 mm and 1074 mm. They are ideal for contemporary furniture, bathrooms, and especially kitchens, where they can be installed on refrigerators, ovens, and large cabinets. They are available in both single-sided and back-to-back versions, perfect for interior and sliding doors.

In this space, all the architectural hardware elements, handles, knobs, wall hooks, door stoppers, and door handles, in addition to belonging to the same model, share a single finish: brushed bronze. This choice unifies the space and reinforces its visual identity. Brushed bronze brings the characteristic strength of metal while conveying a subtle, timeless warmth that dialogues with the modernity and elegance of the environment.

STRENGTH AND SOPHISTICATION

Inspired by the solidity of large foundries, the Casey series, designed by German studio KASCHKASCH, evokes the strength and character of freshly cast metal. Its cylindrical shape, combined with a textured base, conveys a tactile and visual contrast that brings strength and sophistication to the environment.

For integral projects, the 2026 collection includes the Casey door handle, an elegant piece that adds character to any door thanks to its unique combination of textures, subtly reinterpreting contemporary industrial aesthetics. To maintain visual consistency, we combine it with the door stopper from the same series, which is screw-mounted to the floor and available in two finishes: textured lava black + matt black and textured metallic brown + matt black.

With three texture combinations, Casey handles are the ideal solution for industrial-inspired kitchens and furniture. The series includes a T-knob, which stands out for its contrasting textures, as well as two handle lengths: 211 mm and 339 mm.

For projects that require consistency across multiple applications, we also offer Casey big, designed for interior and sliding doors. It is available in two lengths, 448 mm and 768 mm, and offers single-sided or back-to-back installation options to suit the needs of each project. In addition, they connect perfectly with the layout and functionality of Casey door stoppers, ideal for this type of door

Color consistency is key in any interior design project. That’s why using elements from the same series and in the same finish guarantees a harmonious and sophisticated visual interpretation of the space. In this sense, the combination of textured metallic brown and matt bronze stands out for its ability to bring warmth and character without sacrificing contemporary elegance. Applied uniformly to knobs, handles, wall hooks, door handles, and door stoppers, this finish creates a common thread that strengthens the design and enhances the identity of the space.

THE WAVING ELEGANCE

The Luv series, designed by German studio KASCHKASCH, takes its name from the German nautical term meaning “against the wind” and is inspired by the soft, undulating lines of sails and boats. Its lightweight shape, characterized by a gentle concavity, gives it an elegant and highly functional aesthetic. Luv combines fluidity, simplicity, and ergonomics, adding a minimalist touch to spaces.

The accessories in the Luv series expand their decorative possibilities in 2026 with the new brushed bronze finish, which gives them strength and harmony.

In the new 2026 collection, the iconic and popular Luv design incorporates its door handle, a solution that, together with the rest of the elements in the series, allows spaces to be configured with a distinctive and consistent character. The family is expanded with a door stopper available in five finishes, reinforcing visual continuity in the most demanding projects. In its knob version, the design incorporates an anti-rotation system, using pins that prevent the knob from turning and protect the furniture from damage, ensuring precise and long-lasting use.

The Luv collection is completed with metal wall hooks, available in five finishes, including a new trendy bronze finish that brings warmth and sophistication to any setting. This same finish is also incorporated into the three sizes of metal handles (51.20 mm knob and 202 mm and 330 mm long handles), thus expanding the possibilities for customization and consistency within the series.

The Luv wood handle, made from certified wood, combines lightness, strength, and a warm Nordic design, available in knobs and handles and four finishes. Among them is the brushed raw finish, which gives the product a natural, handcrafted texture, providing a unique touch and allowing each project to be customized according to the tone and essence of the wood that accompanies it. The wall hooks and door stoppers are available in one size and three finishes, maintaining the consistency of the series. The Luv wood big version stands out, measuring 418.50 mm and 1026.50 mm, the latter with three support legs. It is available in a single-sided and back-to-back installation system.

Viefe Unconditionals

Design that lasts

The simplicity of good design creates timeless icons. Pieces that are must-haves, beyond fads and trends. Like Viefe's unconditional models, an unbeatable synthesis of form, function, and aesthetics. The best expression of good design.

These models encapsulate our understanding of aesthetics: pure forms, noble materials, and carefully studied proportions. Their purpose goes beyond everyday use. Each product has been created to elevate the spaces around it and complement projects with its timeless style. Their pure forms are their hallmark. Perhaps that is why they have the ability to transform the everyday into something exceptional.

In the 2026 Collection, the new Nexx aluminum handle stands out for its minimalist design and the precision of its connection between the cylindrical bar and rectangular base, a detail that reinforces its contemporary character. It is available in two lengths (180 mm and 276 mm), with a bar diameter of 8.6 mm as well as a 25 mm knob. Nexx comes in four finishes—stainless steel look, brushed black, brushed brass cava, and brushed bronze—allowing it to blend into a wide variety of interior design projects with a subtle classic feel.

The Kumo aluminum handle features a circular profile supported by subtly offset feet, creating a floating effect that makes it appear suspended in the air. This visual effect is enhanced by a “floating” side panel, a distinctive feature that identifies all the pieces in the collection. Available in two lengths (248 mm and 480 mm) and four finishes—stainless steel look, black titanium, brushed brass cava, and brushed bronze—Kumo brings a sense of lightness to the space, reinforces the formal narrative of the project, stylizes the furniture and allows for coherent integration into different environments within the same interior.

Pull handles

The art conquers the doors

There are many types of sculptures. At Viefe, we dare to turn them into pull handles. Pieces that transcend their function to become key elements of every interior. Capable of changing the visual perception of doors and the spaces that house them.

Their striking presence, generous diameters—over 20 mm—and meticulous finishes have been designed for comprehensive interior design projects. They are all suitable for sliding doors, interior doors, or large closets, and even appliances, providing a consistent aesthetic in all environments.

These door handles are decorative in their own right. They can be combined with their respective versions of knobs and handles for furniture, thus creating cohesive interiors for both residential and contract projects.

INSTALLATION SYSTEMS ADAPTED TO EVERY NEED

Our door handles are available in single-sided and back-to-back installation systems.

The single-sided system is ideal for doors that open from one side only and where a clean, functional result is desired. The back-to-back system, on the other hand, allows for symmetrical mounting, offering convenience and access from both sides of the door. This solution is especially recommended for interior or sliding doors that connect different spaces, ensuring ergonomics and aesthetic continuity without compromising strength or fastening.

Both systems have been designed for easy installation, to adapt to different door thicknesses, and to maintain visual consistency in large-scale projects where every detail counts.

PROFESSIONAL TIP:

The longer the handle, the greater its ability to transform the perception of the door and the space.

The Kumo wood big and Kumo wood big one versions feature diameters of 22 mm and 32 mm respectively, dimensions that make them unique pieces capable of transforming any door into a sculptural element, with great presence, verticality, and a marked sense of artisanal luxury. Kumo wood big comes in lengths of 610 mm and 1010 mm, while Kumo wood big one is available in 858 mm and 1596 mm.

Its two certified wood finishes—oak and walnut—combined with the three finishes available for the feet—stainless steel look, titanium black, and brass—offer a high degree of customization and multiple possibilities for integration into large spaces, both indoors and outdoors.

Range of finishes

Finishes add character that

The aesthetic identity of a project lies in the finishes. Choosing our accessories in oak or, alternatively, in polished nickel can completely change the personality of a space. Their textures, tones, and sheens interact with the furniture and play with the lighting. They influence the materials used on walls, floors, and ceilings giving them character. They have the ability to transform the functional into the sensory.

THE LIGHT OF ALUMINUM

Aluminum transforms our accessories into points of light. Its reflections create visual rhythms that organize each space. Each of its finishes—from radiant polished nickel to deep titanium black or vintage brushed bronze—implies a different way of inhabiting environments.

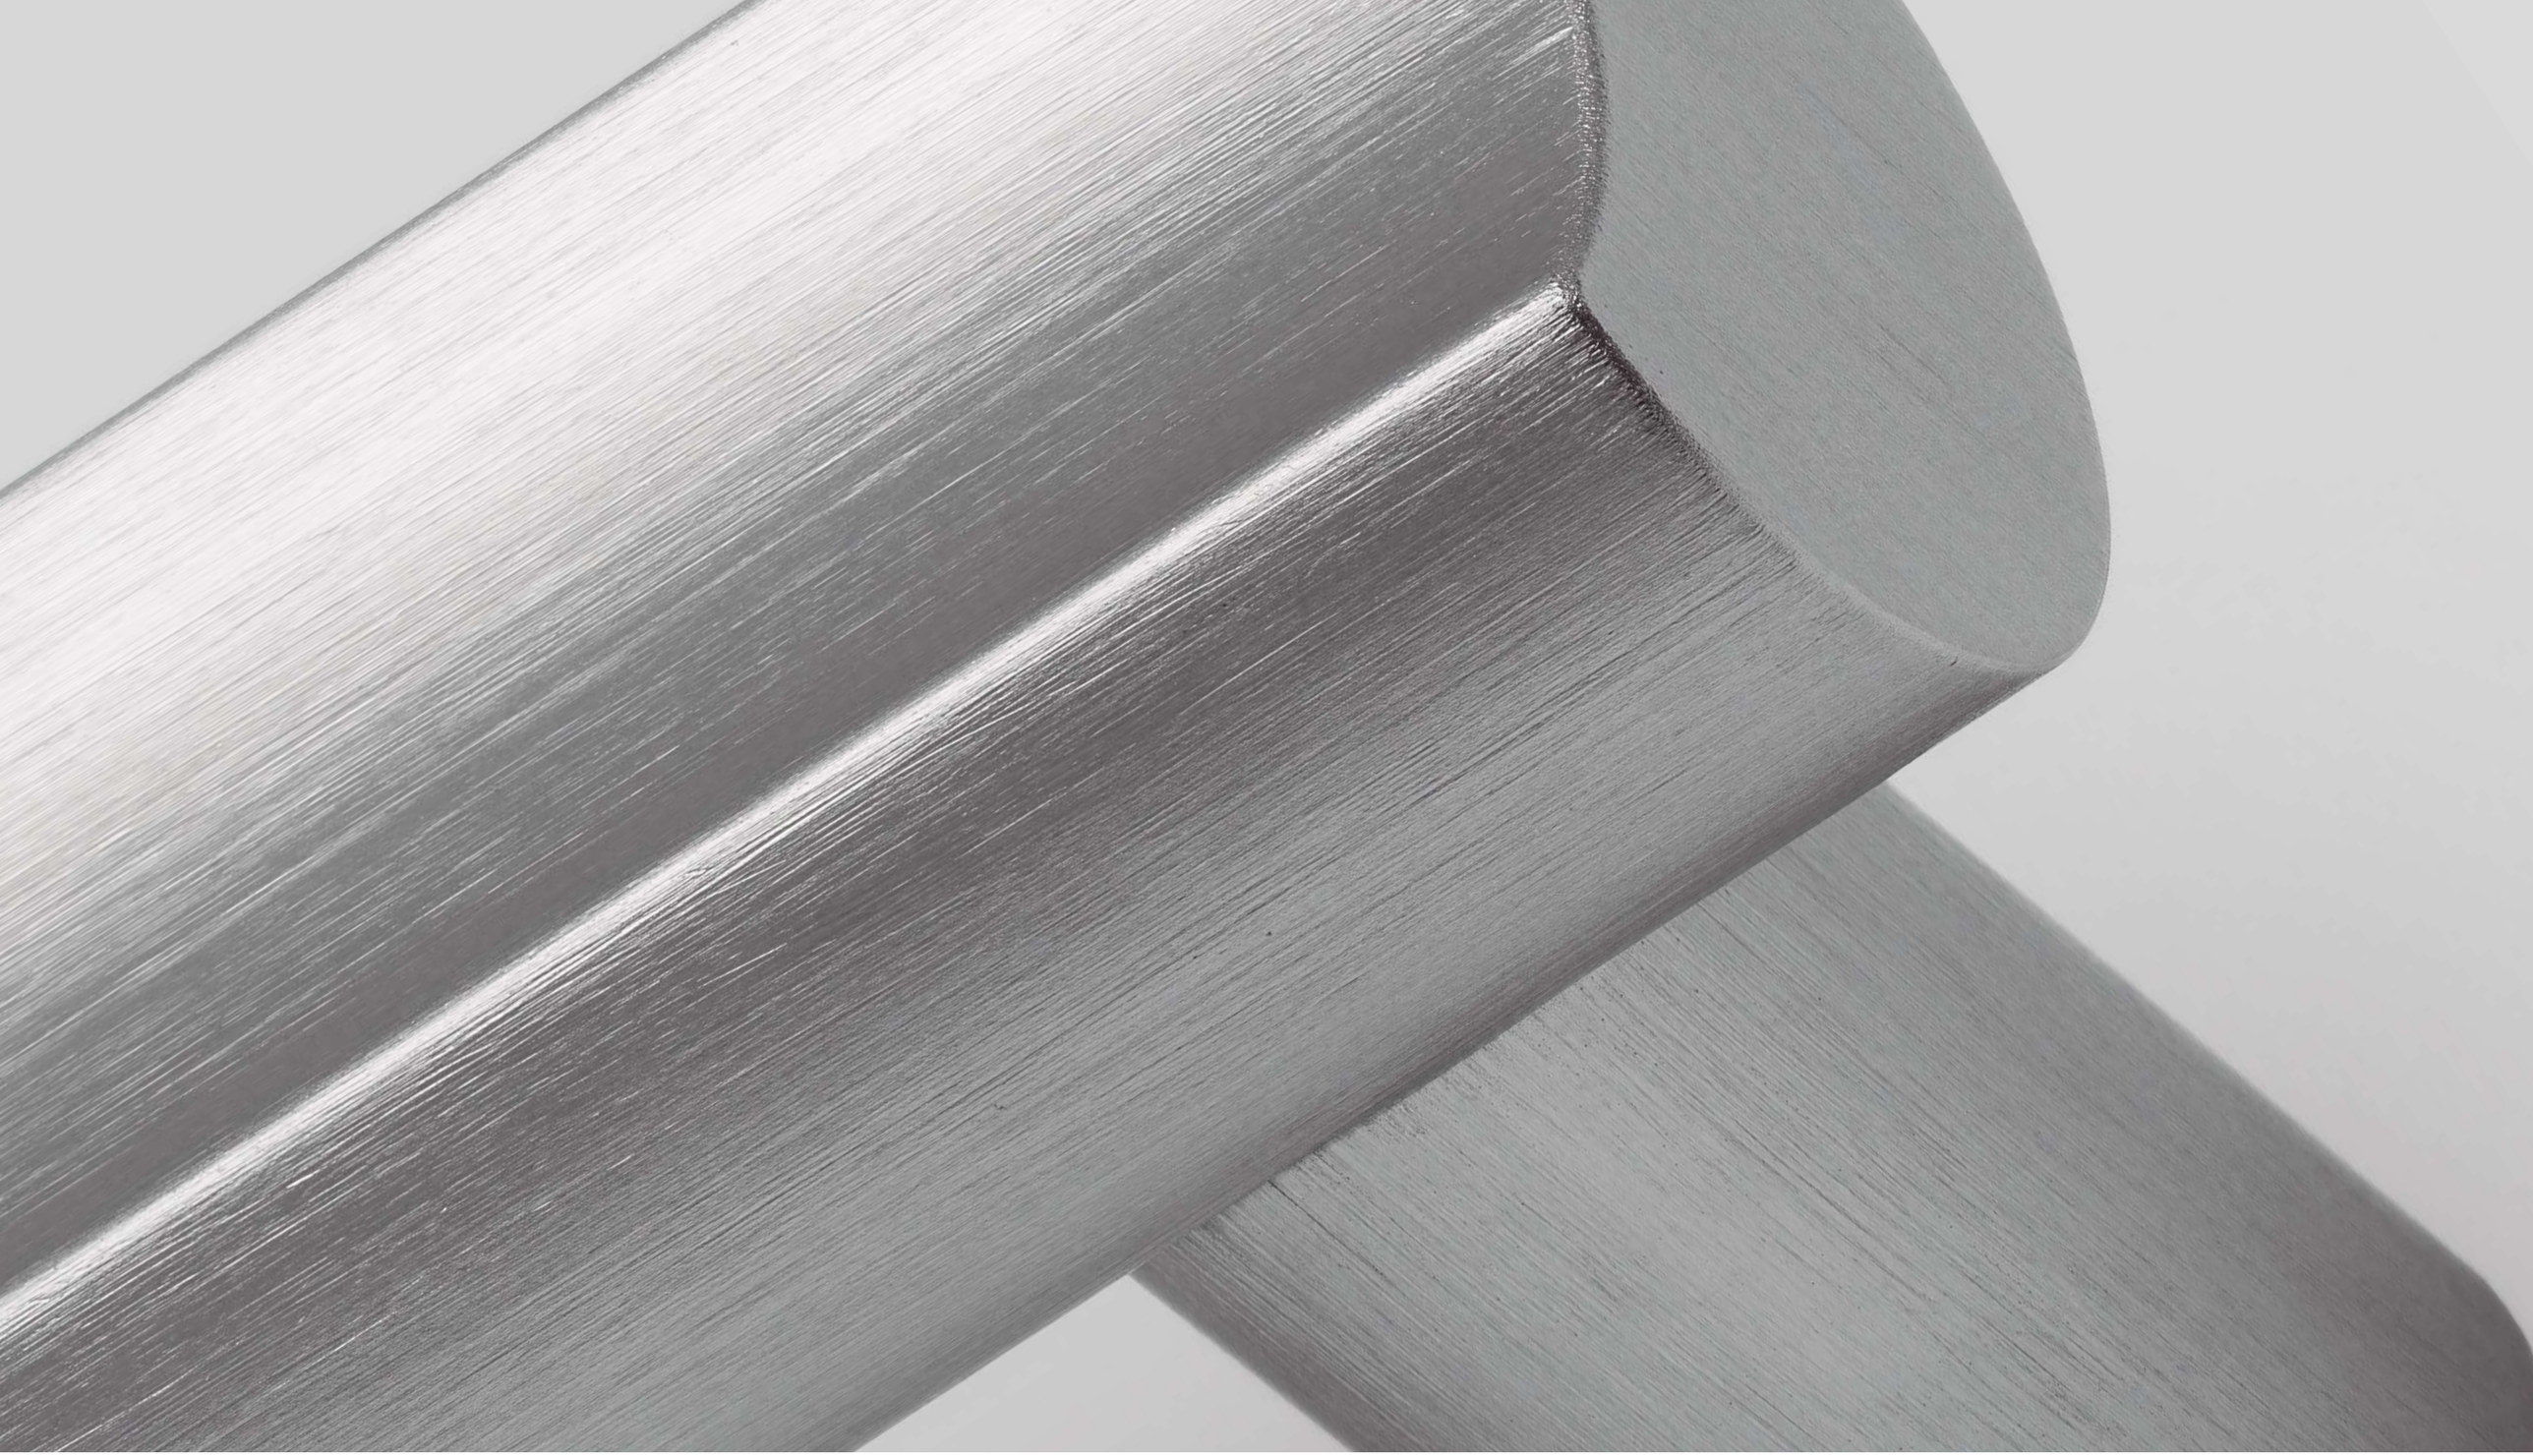

NATURAL WARMTH OF WOOD

The use of wood in our accessories connects interiors with nature. Perfect for all types of contemporary projects, they convey warmth and contribute to creating aesthetic balance. Their natural texture and perfect machining make them pleasant to the touch and extremely visually appealing.

(L05) Polished nickel

Understated and undeniably classy, the polished nickel finish brings elegant luminosity to any interior. Its shiny surface enriches the perception of space and gives it greater visual amplitude. Our decorative accessories in this finish combine precision, clarity, and timeless refinement. It is perfect for projects where light plays a structural role and where a touch of sophistication is needed that remains unobtrusive.

Our stainless steel look accessories stand out for their sophisticated neutrality and their ability to blend in with multiple decorative styles. Their clean, balanced appearance creates a tidy visual impression, reinforcing the coherence of the project without seeking to steal the show. The stainless steel look offers a perfect solution for minimalist and industrial interiors, where functionality is prioritized with a high aesthetic standard. A safe, versatile, and resistant finish that accompanies timeless design.

(L24) Stainless steel look

(L30) Brushed black

The brushed black finish introduces an enveloping visual depth and reinforces the sculptural character of our architectural hardware designs. Its matt tone and brushed finish allow you to create elegant contrasts in interiors without resorting to shine, bringing order and hierarchy to furniture and surfaces. Understated yet expressive, this finish is capable of creating a contemporary impact in projects where every detail counts.

Our titanium black architectural hardware elements introduce a bold and elegant presence to the most demanding projects. Its resistance, combined with its ability to create powerful contrasts, makes this finish a timeless choice suitable for all types of interior design. It adds visual depth, organizes space through shadow, and enhances the lines of furniture. A versatile finish that dialogues with multiple materials—wood, stone, lacquer, or metal—and adds identity without being flashy.

(L33) Titanium black

(L618) Brushed brass cava

The brushed brass cava finish blends contemporary design sensibility with a cutting-edge vintage feel. Its soft, irregular scratches and satin appearance add a warm and extremely elegant aesthetic to our decorative accessories. This finish has the ability to fill a space with nuance, as it delicately captures the light and adds a touch of understated glamour depending on the elements surrounding it. Perfect for projects seeking sophistication, material consistency, and lasting personality.

141

Aluminum

(L619) Brushed bronze

Brushed bronze is a finish that stands out for its unique balance, as it conveys strength and harmony in equal measure. Its warm bronze tone blends tradition with modernity and adds character to our architectural hardware designs, creating a decorative effect that can elevate any setting with understated elegance. Its brushed texture adds tactile depth and creates a solid yet friendly presence, ideal for projects that exude sophistication and timeless style.

(W16) Oak

The oak finish brings a natural warmth to our designs, adding balance to all kinds of environments. Its soft, organic tone humanizes contemporary spaces and connects interiors through a serene sensory aesthetic. It works especially well in projects that include mineral or metallic textures, as it acts as a warm counterpoint. It is ideal for creating welcoming interiors with unmistakable material authenticity.

(W17) Walnut

The deep color of walnut wood conveys elegance while adding character to interiors. Our decorative accessories in this finish emphasize the aesthetics of contract and residential projects that seek sophistication and depth. The dark tones and defined grain of walnut blend seamlessly with woods, warm metals, and neutral palettes, creating a sense of aesthetic maturity without losing warmth.

(W00) Raw wood

The raw wood finish presents wood in its purest state, without treatments or varnishes, preserving its natural texture and the original tone of this organic material. Its chromatic neutrality allows each accessory to dialogue with the essence of both classic and contemporary interiors, facilitating combinations with different materials and finishes. It brings authenticity and a distinctive character to spaces, allowing for the creation of balanced environments with great visual warmth.

Editorial team: Viefe
Creative direction and design: Atipus

Kairos is a Greek concept that refers to the right moment, that instant when everything is decided but still remains silent. When the intention is clear, action is imminent and style inevitable.

Viefe®

This catalogue introduces the new products in Viefe's Kairos 2026 collection. To explore all available products, see our specific catalogues of:

Handles and knobs / Wall hooks / Door stoppers
